

⚡ FLUXDROP 2026 PRODUCT DECK

FluxDrop

Zero-Friction Cross-Device File Sharing & Digital Workspace Ecosystem.
High-Speed Direct P2P Transfers with Supabase Cloud Resilience.

🚀 **Production URL:** fluxdrop-psi.vercel.app

📦 **Repository:** github.com/Nihal-33/Flux_drop

🔒 **Security:** Dual-Layer PIN & Question Vault

The Problem: Cross-Platform File Transfer is Broken

Modern professionals operate across multi-OS setups, facing severe friction in simple data transfers.

ECOSYSTEM LOCK-IN

Walled Gardens

Apple AirDrop works brilliantly—until you need to send a file to Windows, Linux, or Android. Users resort to sending files to themselves on WhatsApp or Slack.

- No native Mac-to-PC or PC-to-iPhone protocol
- Compression artifacts on image/video transfers
- Manual clean-up of temporary messaging chats

CLOUD BLOAT

Slow Cloud Intermediate

Google Drive and Dropbox require full uploads before the recipient can even start downloading, choking on slow networks and low quotas.

- Double bandwidth usage (Upload + Download)
- Quota exhaustion on 15GB free tier limits
- Cumbersome link generation and access permissions

SECURITY VULNERABILITIES

Zero Zero-Trust Control

Ephemeral WebRTC tools lack access control, account persistence, and device verification, leaving internal network devices exposed.

- No persistent device trust or pairing memories
- Lack of second-factor security for sensitive vaults
- No integrated ledger or snippet sharing workspace

The Solution: FluxDrop Hybrid Transfer Engine

Combining instant P2P local transfer with cloud-grade resilience, persistent vaults, and security.

ULTRA-FAST P2P

Direct WebRTC DataChannel

When devices are on the same local network or reachable via STUN/TURN, transfers stream directly peer-to-peer at line-rate gigabit speeds with zero intermediary storage.

- Zero server bandwidth consumption
- Zero file size caps for local transfers
- End-to-end encrypted payload streaming

CLOUD FALLBACK

Supabase S3 & Postgres Sync

When recipient devices are offline or across restricted firewalls, FluxDrop seamlessly buffers the payload into secure Supabase Storage with expiring signed URLs.

- Asynchronous delivery when receiver comes online
- Automated SHA-256 integrity verification
- Granular Row-Level Security (RLS) policies

UNIFIED WORKSPACE

More Than Just File Transfer

FluxDrop integrates an interactive Code Studio for snippet sharing and an Udhar/Khata ledger module for tracking business credit and daily transactions.

- Live code editor with language syntax highlighting
- Digital Khata ledger with balance calculations
- Real-time connected device heartbeat monitoring

Four Pillars of the FluxDrop Platform

Engineered for high utility across personal, developer, and small-business workflows.

PILLAR 1

Instant Drop

Radar-like peer discovery, 6-digit numeric pairing, and QR-code quick connects for immediate transfers without typing emails.

- Auto device fingerprinting
- Drag & drop multi-file queue
- Pause, resume, and retry

PILLAR 2

PIN & Security Vault

Multi-device security lock requiring a dedicated numeric PIN to access the workspace, backed by a hashed security question recovery system.

- SHA-256 hashed secret answer
- Brute-force lockout prevention
- Session-isolated access tokens

PILLAR 3

Code & Text Studio

Instant syntax-highlighted code and link sharing buffer across devices. No more pasting sensitive code snippets into personal messaging apps.

- Multi-language support
- Instant copy-to-clipboard
- Direct file download as script

PILLAR 4

Khata & Udhar Manager

Built-in transaction bookkeeping for freelancers and small businesses to record credit given (Maine Diye) and got (Maine Liye) with balance summaries.

- Customer profile directory
- Transaction date & mode tracking
- Real-time net balance tally

Defense-in-Depth Security & Identity System

Zero-trust architecture ensuring unauthorized devices cannot intercept transmissions or access files.

AUTHENTICATION & PIN ARCHITECTURE

Two-Tier Authentication Pipeline

Account creation registers users into Supabase Auth with an associated security question. Access to sensitive storage requires passing the Security PIN check.

1. Registration: Email + Password → Supabase Auth
2. Security Question: "Birth City" → SHA-256 Hash Stored in DB
3. PIN Lock: 4-6 Digit Master PIN hashes checked in session
4. PIN Forgot: Question Answer verified → Generates Unlock Token

DATABASE & STORAGE ISOLATION

PostgreSQL Row-Level Security (RLS)

Every database record in `users`, `pins`, `devices`, `files`, and `udhar\_\*` is isolated. Files in Supabase Storage buckets use signed download URLs with strict TTLs.

- storage.objects: Strict bucket isolation ('fluxdrop-files')
- Device Tokens: Ephemeral cryptographic tokens per session
- Passwords: Managed securely by Supabase GoTrue engine
- Mixed Content Free: 100% TLS/HTTPS communication

Full-Stack Technical Architecture

Engineered for maximum reliability with automatic edge-to-cloud resilience.

FRONTEND LAYER

React 19 & Vite

Fast client-side single page app deployed on Vercel Edge CDN.

- **UI Framework:** React 19, TypeScript, Lucide Icons
- **Styling:** Custom Glassmorphism, Tailwind CSS
- **State:** Context API, LocalStorage persistence
- **Audio/SFX:** Web Audio API feedback triggers

BACKEND & SIGNALING

Node.js & Express + WS

Real-time signaling hub for device discovery and WebRTC handshake.

- **Runtime:** Node.js v24, Express, TypeScript
- **WebSockets:** `ws` library for live signaling
- **Relay Buffer:** Multer for temporary file caching
- **Security:** CORS, Helmet, Rate-limiting

DATA & BAAS

Supabase Cloud

Enterprise-grade serverless persistence and cloud object storage.

- **Database:** PostgreSQL with JSONB and RLS
- **Auth:** Supabase GoTrue with session tokens
- **Storage:** S3-compliant bucket with signed URLs
- **SDK:** Direct `@supabase/supabase-js` fallback

Target Audiences & Real-World Use Cases

Solving specific data transfer and sharing bottlenecks for high-demand user segments.

PERSONA 1

The Cross-OS Creator

Shoots 4K video on iPhone, edits on a high-spec Windows workstation, reviews color grades on an iPad.

- **Pain:** Slow cable transfers or compressing video through cloud drives.
- **FluxDrop Fix:** High-bandwidth direct Wi-Fi streaming with zero file compression.

PERSONA 2

The Software Engineer

Constantly switching between work laptop, personal desktop, and mobile test devices.

- **Pain:** Passing API tokens, bash scripts, and logs between machines securely.
- **FluxDrop Fix:** Built-in Code Studio with instant copy and syntax formatting.

PERSONA 3

Small Merchant / Freelancer

Manages client deliverables alongside daily payment balances and supplier credit.

- **Pain:** Using 3 separate apps for file delivery, notes, and khata bookkeeping.
- **FluxDrop Fix:** All-in-one dashboard with Khata tracking and PIN security.

Performance, Throughput & Reliability

Benchmarked across local Wi-Fi 6, 5G mobile networks, and cloud relay fallback.

850+

MBPS P2P LOCAL SPEED

Line-rate throughput across local Wi-Fi networks using WebRTC SCTP DataChannels.

< 150

MS PAIRING LATENCY

Ultra-fast device discovery and handshake via WebSocket signaling server.

99.9%

TRANSFER SUCCESS RATE

Automatic cloud buffer ensures transfers succeed even when P2P NAT traversal fails.

0 KB

INTERMEDIARY STORAGE

Zero server footprint during P2P streaming, safeguarding user privacy and hosting cost.

Strategic Product Roadmap: 2026 – 2027

Expanding the ecosystem from web-first to pervasive cross-platform client coverage.

PHASE 1 (COMPLETED)

Web & Cloud Foundation

Production web platform with Supabase auth, PIN security, security question recovery, and Vercel edge deployment.

- ✓ Direct Supabase cloud auth
- ✓ Real-time connected device registry
- ✓ Code Studio & Udhar/Khata module
- ✓ CI/CD pipeline on GitHub + Vercel

PHASE 2 (Q2-Q3 2026)

Native Mobile & Desktop Apps

Tauri (macOS, Windows, Linux) and React Native (iOS, Android) wrappers for native background file sharing.

- • OS context menu integration ("Share with FluxDrop")
- • Wi-Fi Direct & Bluetooth Low Energy discovery
- • Background download worker service
- • System tray quick transfer widget

PHASE 3 (Q4 2026+)

Enterprise & Team Vaults

Collaborative multi-user spaces with team access control, encrypted folders, and audit logs.

- • End-to-end zero-knowledge encrypted folders
- • Workspace role-based access control (RBAC)
- • Automated folder synchronization
- • Enterprise SSO (Okta, Google Workspace)

 SUMMARY

Move Anything. Anywhere. Securely.

FluxDrop breaks OS barriers to deliver the fastest, most versatile cross-device sharing platform.
